Description

- Limescale protection agent for piping systems from all materials. Prevents lime sediment through stabilization of limestone in extremely hard water.
- Fully efficient up to water temperature of max. 65°C
- In case of water temperature up to 80 °C the chemical agent still provides for prevention of lime sediment during app. 24 hours.
- Prevents limescale adhesion on heat exchanger walls, pipes and fittings

Application Fields

- Chemical agent for treatment of very hard corrosive cold, warm, drinking and process water

Application

Dose the agent directly from the original packing using a dosing device. The quantity to be added amounts to 100 ml of **SANIT aquaris® M4** per 1 m³ of water. This corresponds to 4,0 mg of phosphate as P205 per 1 litre of water. 20 litres of **SANIT aquaris® M4** will be enough for app. 200 m³ of water. **SANIT aquaris® M4** is approved for treatment of drinking water (in case of adding not more than 5 mg/l P205) according to Drinking Water Regulation and Food Law. The chemical agent corresponds to the ordinance regulating the use of drinking water addition agents.

Best before

- not relevant
