Description

- Active oxygen granulat
- For chlorine-free disinfection of bathing water
- The granulate dissolves in water immediately
- Aquablanc® O₂ used together with SANIT Alba provides for crystal clear swimming water

Application fields

- Swimming pools
- Pools
- Whirlpools

Application

Ideal values: pH-value: 7,0 – 7,4

First dosing: If you fill the swimming pool with new water, add 200 g SANIT Aquablanc® O₂ per 10 m³ of swimming water. Additionally we recommend to use 300 ml SANIT Alba per 10 m³ of water.

Subsequent dosing: add 100 g SANIT Aquablanc® O₂ per 10 m³ of bathing water once in a week. In addition we recommend to add 100 ml SANIT Alba per 10 m³ of water every second week.

When using the product for a whirlpool adapt the dosing to the pool's volume. In case of warm water you may require higher dosage. The ideal time for dosing is in the evening. This granulate is fast soluble. You can add it into swimming water directly or dissolve it in some water first. Pour the dilution into water alongside the pool edge.

Never mix it with other chemicals!

Adding of additional water care products to swimming water can provide for undesired chemical reactions.
